CAUTION / VORSICHT / ATTENTION

- If the system should smoke or produce strange smells, immediately cut the power switch to the STANDBY position, unplug the power cord, and contact your store of purchase.
- Sollte das Gerät Rauch produzieren oder eigenartige Gerüche, stellen Sie den Netzschalter sofort auf die Position STANDBY (Berücksicht), ziehen Sie den Netzstecker heraus und kontaktieren Sie Ihren Händler.
- Si le système doit émettre de la fumée ou des odeurs bizarres, placez l'interrupteur d'alimentation immédiatement sur la position de veille (STANDBY), débranchez le cordon d'alimentation et contactez le distributeur.

Konformitätserklärung

Die DENON Electronic GmbH
Halsenstraße 32
40880 Ratingen

Erklärt als Hersteller/Importeur, daß das in dieser Bedienungsanleitung beschriebene Gerät den Technischen Vorschriften für Ton- und Fernseh-Rundfunkempfänger nach der Antriebsleistung für Post und Telekommunikation vom 31.8.1989 entspricht.

4 INSTALLATION PRECAUTIONS

Using this amplifier or other electronic equipment simultaneously with a tuner or TV may result in noise in the sound or picture.

- If this should happen, take the following steps:
 1. Install the amplifier as far as possible from the tuner or TV.
 2. Keep the antenna line of the tuner or TV as far as possible from the amplifier's power cord and connection cables.
 3. This problem is especially frequent when using indoor antennas or 300 Ω coax feeder lines. We recommend using outdoor antennas and 75 Ω coaxial cables.

For cooling purposes, do not place another AV component directly on top of the amplifier. Be sure to leave a space of at least 10 cm.

5 HANDLING PRECAUTIONS

- Switching the input function when the input jacks are unconnected
Switching the input function when a component is not connected to the input jacks may result in the generation of click noise. If this should happen, turn down the MASTER VOLUME or connect a component to the input jacks.

- Playback with Dolby Pro Logic
The Dolby Pro Logic position provides optimum effectiveness for sources recorded with Dolby Surround. A different surround mode should be selected when playing back sources other than this type. Note in particular that when playing back multichannel recording sources, the bypass mode or the simulated mode should be used. Other modes will not provide a suitable effect.

- Muting of the LINE OUT jacks
An electronic muting circuit has been connected to the LINE OUT jacks. This circuit greatly attenuates the output signal for approximately 8 seconds after the power has been switched on. Raising the volume during this operation will result in an extremely large output once the muting has ended, so volume adjustments should be made only after the completion of muting.

- Rear output level while in the surround mode
The rear level will seem small for sources other than Dolby Surround sources. The reason for this is that a rear playback signal is not contained in the sources. When playing back such sources with a surround function, the mode should be set to Dolby Surround. The rear output level may seem small for sources having a small rear signal, even Dolby Surround sources.

- Opening and closing the door
This amplifier is equipped with a door on the front panel. Press the "DOOR OPEN" position printed at the upper right edge of the door to release and open the door. Likewise, to close the door, press in the same position until a click sound is heard.

NOTE:
The door will open naturally once it has been released, but it may stop before fully opening. This is not a fault; just lightly press the door open.

- Read this manual carefully to ensure that you take full advantage of all the features of this surround amplifier. Keep the manual in a safe place for future reference.
- Be sure to check the date of purchase and the store's name of purchase have been filled in properly on the warranty issued at your store of purchase.

DENON SERVICE NETWORK

Check that the following parts are included in the package sold from the main unit:

- 1 Operating Instructions
- 2 Remote Controller (RC-178)
- 3 RP/AA Batteries

3 BEFORE USING

- Read the following cautions carefully before using the amplifier.
 - Moving the unit
Be sure to unplug the power cord and disconnect other cords connecting the amplifier to other audio units before moving the unit. This is to prevent damaging or short-circuiting the cords.
 - Before turning on the power switch
Check again to make sure that all connections are correct and that there are no problems with the connection cords. Be sure to turn the power "STANDBY" before disconnecting or connecting cords.
- Refresh the operating instructions
After reading this manual, store it in a safe place.
- The illustrations used in this manual may differ somewhat from the actual amplifier.

6 CONNECTIONS

Connecting video decks (VCR)

Connections for video input and output.
Connect the video deck's video output jack to the amplifier's VCR IN jack (yellow) and the video deck's video input jack to the amplifier's VCR OUT jack (yellow) using 75 Ω (ohm) video coaxial cable pin-plug cords.

Connecting the audio input and output jacks

• Connect the video deck's audio output jacks to the amplifier's [AUDIO] VCR IN jacks and the video deck's audio input jacks to the amplifier's [AUDIO] VCR OUT jacks using pin-plug cords.

Connecting a video disc player (VDP)

• Connect the video disc player's video output jack to the amplifier's VIDEO VDP (yellow) jack using a 75 Ω (ohm) video coaxial cable pin-plug cord.
• Connect the video disc player's audio output jacks to the amplifier's AUDIO VDP INPUT jacks using pin-plug cords.

Connecting a monitor TV

• Connect the TV's video input jack to the amplifier's [VIDEO] MONITOR OUT jack using a 75 Ω (ohm) video coaxial cable pin-plug cord.

75 Ω (ohm) video coaxial cable pin-plug cord

Connecting the speaker system

• A total of three speakers can be connected to the AVC-77, including a pair of rear speakers and one center speaker.
• The speaker system must be connected to the system, making sure that the polarity is installed (+ with + and - with -). Misconnection of the speaker system will result in a distorted sound, and in some cases, damage to the speakers.
• The location of the speaker being installed and the location of the individual connections in the speaker cord must be connected with adjacent terminals on the same side of the speaker cord with the rear panel.

Speaker impedance

• The impedance of the front and rear speakers should be 8 Ω (ohm).
• Use of a system with an impedance substantially different from the protection circuit and stereo's built-in.

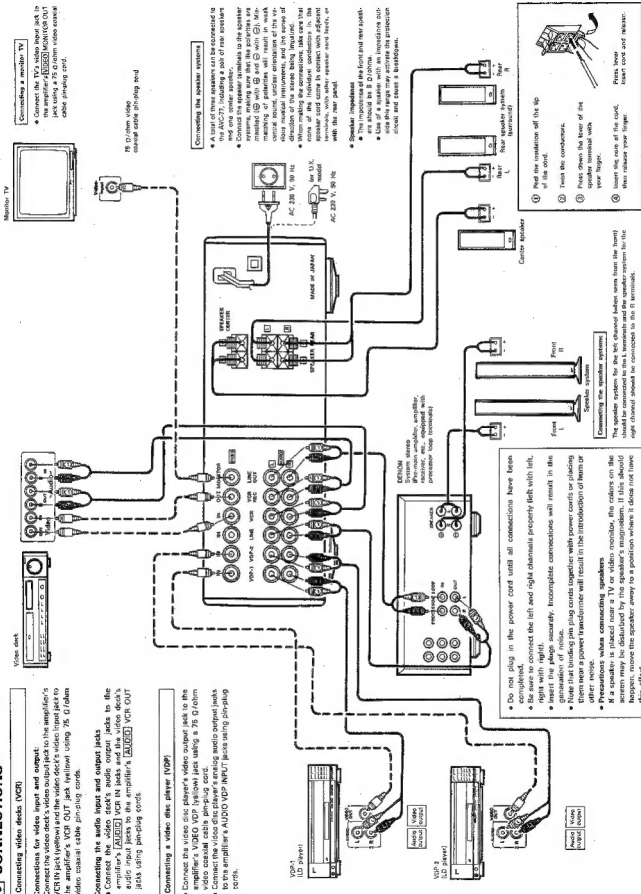

1. Peel the insulation off the tip of the cord.
2. Twist the conductors.
3. Press down the lower of the speaker terminal with your finger.
4. Insert the end of the cord, then release your finger.

The speaker system for the left channel (seen from the front) is connected to the left terminal and the speaker system for the right channel should be connected to the right terminal.

Connecting the speaker system

Precautions when connecting speakers

• Do not plug in the power cord until all connections have been completed.
• Be sure to connect the left and right channels properly (left with left, right with right).
• Inspect the connections carefully. Incorrect connections will result in the introduction of noise.
• Note that binding pin plug cords together with power cords or placing them near a power transformer will result in the introduction of hum or other noise.
• Precautions when connecting speakers: The location of the speaker being installed and the location of the individual connections in the speaker cord must be connected with adjacent terminals on the same side of the speaker cord with the rear panel.

7 DOLBY PRO LOGIC SURROUND

Setting delay time

Delay time depends on the listening position. Look at the diagram on the right and set the optimum delay time for the size of your room and your listening position. For example, if your listening position is 4 m away from the front speakers, the optimum delay time will be 20 msec. The variation range of the delay time differs from one mode to another. For more information on the delay time variation range, see page 7.

Adjusting the input balance

This amplifier is equipped with an auto input balance circuit, so there is no input balance adjustment knob.

The ON/OFF and delay time setting for the speaker output (FRONT, CENTER, REAR) and the volume adjustment for the rear and center speakers can be set individually for each surround mode.

Speaker placement in Dolby Pro Logic surround mode

When playback backtracks in Dolby Pro Logic surround mode, use of a center speaker will provide the best effect.

Wide mode

Wide mode: This is the best mode to use when the center channel speaker is of the same grade as the speakers on the right and left. The entire frequency band, from low regions to high regions, is reproduced by the center channel speaker, giving an exciting sound field for your enjoyment.

Normal mode

Normal mode: This is the best mode to use if the center channel is smaller than the speakers on the left and right. Signals of 100 Hz or below, which has almost no effect on orientation, are divided between the left and right channels. Signals of 100 Hz or above are reproduced by the center channel, so the bass on the left and right channels is deeper.

Phantom mode

Phantom mode: This is the mode to use when the center channel playback speaker is not in use. The signals of 100 Hz or below are reproduced by the left and right speakers in the center during playback, so that you can enjoy an exciting sound field even without using the center speaker.

Test tone

The test tone produces a test signal for adjusting the level in each channel in the Dolby Pro Logic surround mode. Before using Dolby Pro Logic surround, position the speakers as described above, find the ideal balance for the volume of each channel, and then use the test tone to adjust the volume etc. so that they sound as if they are at the same level.

In normal and wide mode, the test tone switches in the following order:

Front left — Center — Front right — Rear

Adjust the volume balance using this signal until the optimum balance is reached.

In phantom mode the switching is as follows:

Front left — Front right — Rear

Note that on this amplifier, the test tone is produced every 4 seconds after the first 2 seconds.

Use the remote control unit (RC-178) to make adjustments using the test tone.

8 PART NAMES AND FUNCTIONS

Front panel

1 POWER switch

- **ON** When this switch is pressed once, the power turns on. When the power is on, the "MUTING" indicator lamp is activated while "MUTING" is flashing to prevent noise when the POWER switch is operated. After several seconds the muting circuit turns off, the "MUTING" indicator turns off and the "MUTING" indicator lamp is in the normal operating mode.
- **STANDBY** Press this switch once again to set the standby mode. "OFF" is displayed on the LCD.

2

- **SURROUND buttons** Press these buttons to select the surround mode.
- **BYPASS button** When this button is pressed, the surround mode is bypassed and the normal stereo sound is produced. No signal is output to the rear channel.
- **MODE selector button** Press this button to select one of the surround modes shown below.

1 DOLBY SURROUND PRO LOGIC

- Use this mode for video software, etc., recorded in Dolby Surround.
- Select the speaker mode according to the speaker position of the speakers.
- Set the delay time to between 15 msec and the msec, according to the size of the room and the position of the speakers.

- **HALL surround** Select this mode to create the atmosphere of a hall.
- The delay time can be set to between 5 msec and 30 msec.

- **SIMULATED** Select this mode to create a surround effect with monaural sources.
- No signals are output to the center channel.
- The delay time can be set to between 5 msec and 30 msec.

- **LIVE** Select this mode to create the atmosphere of a live program in a studio.
- The delay time is set at 0 msec.

3 PANEL button

- When this button is pressed, the current settings are displayed on the LCD.
- Press this button to return to the normal display.

4 REMOTE SENSOR

- The remote control unit is pointed toward this sensor and operated.

5 LCD liquid crystal display

- The surround mode and input and output information is displayed here when the power is turned on.
- When the "MUTING" indicator lamp is activated, the "MUTING" button is pressed, a display pertaining to that button is shown for approximately 5 seconds, after which the surround mode is once again displayed.
- Refer to page 8 for details on the LCD indicators.

6 MASTER VOLUME control

- Turn the control clockwise (\nearrow) to increase the volume, counterclockwise (\nwarrow) to decrease it.

7 OUTPUT BALANCE control

- Use this to adjust the balance between the left and right outputs to create an effective surround sound.

8 REAR speaker volume control buttons

- Use these buttons to adjust the volume of the rear (surround) speakers.

• UP:

- Press this to increase the volume.
- **DOWN:** Press this to decrease the volume.
- The volume changes while one of the buttons is pressed and the volume change is displayed on the LCD.

- These buttons do not function when in the bypass mode.

9 CENTER speaker volume control buttons

- **UP:** Press this to increase the volume.
- **DOWN:** Press this to decrease the volume.
- The volume changes while one of the buttons is pressed, and stops changing when the button is released. The volume change is displayed on the LCD.
- These buttons do not function when in the hall, live, simulated or Dolby Pro Logic phantom modes.

10 Input selector buttons

- Use these buttons to select the input audio and video signals.
- **VDP-1:** Press this to use the VDP connected to the VDP-1 jacks.
- **VDP-2:** Press this to use the VDP connected to the VDP-2 jacks.
- **VCR:** Press this to use the video deck connected to the VCR jacks.
- **LINE:** Press this when an amplifier or receiver equipped with processor loop terminals is connected to select that component.

11 DELAY selector button

- Press this button to switch the delay time, as shown below.
- When Dolby Pro Logic is selected with the SURROUND MODE button:

12 TRAP DOOR

- Press the right edge to open the door.
- To close the door, push the right edge. A click is heard to indicate that the door is closed.

10 REMOTE CONTROL UNIT

Following the procedure outlined below, insert the batteries before using the remote control unit.

Range of operation of the remote control unit

Point the remote control unit at the remote control sensor as shown on the diagram at the left.

NOTES:

- The remote control unit can be used from a straight distance of approximately 7 meters, but this distance will be reduced if there are obstacles between the remote control unit and the remote control sensor. If the remote control sensor is exposed to direct sunlight or other strong light, or if operated from an angle, rays or other devices emitting pulsed light rays nearby may result in malfunction, so keep the set as far away from such devices as possible.

Inserting the batteries

1. Open the bottom cover of the remote control unit and remove the battery cover.

2. Insert the two R6/AA batteries, matching the ⊕ and ⊖ marks on the batteries with those in the cover. Close the bottom cover until it clicks shut.

Buttons layout

- POWER button
- FUNCTION button
- SURROUND MODE button
- TEST TONE button

Press the TEST TONE button to emit test signals for adjusting the level of the different channels in the Dolby Pro Logic Surround mode.

Before playing software recorded in Dolby Pro Logic Surround, position the speakers, then use the test tones to adjust the sound level of the different channels. In the normal and wide modes, the test tones are emitted in the following order:

Front-left — Center — Front-right — Rear — Right — Left

- MASTER VOLUME button
- REAR channel level button
- CENTER channel level button

12 TROUBLESHOOTING

- Check these points before you conclude that the amplifier has developed a fault.
1. Are the connections correct?
 2. Are you operating the equipment correctly, as described in the operating instructions?
 3. Are the speakers, tunable, AC plug and other components connected properly?
- If the unit does not work properly, make the checks described in the table below.
- If the fault is not covered in this table, the amplifier has probably developed a fault, and you should switch off the power immediately and contact your dealer or your nearest DENON Service Center or dealership.

13 LAST FUNCTION MEMORY

- This amplifier has a Last Function Memory which stores the input and output state immediately before the power is switched off. Because of this function, even when the power has been switched off, the memory is stored for about 3 days, so when the power is switched on again, there is no need to carry out complicated settings again.
